Cooking Starches

Description
In this activity students will become familiar with the equipment used in cooking various starches (pasta, rice, potato) and will demonstrate different cooking methods used to prepare three different starches.

Lesson Objectives
Students will be able to:

• identify various types of pasta and their uses
• identify various types of rice and their uses
• identify various types of potatoes and their uses
• prepare rice using the boiling, pilaf, or risotto method
• prepare potatoes, and
• prepare pasta using the big pot boiling method.

Assumptions
• The teacher will become familiar with and utilize correct starch-making techniques using appropriate resources.
• The teacher will provide a variety of ingredients for the starch labs.

The following Activity Plans are to be completed prior to this activity:

• Introductory Knife Skills
• Workstation Station Set-up
• Recipe Comprehension

Safety Considerations
General
• Use proper PPE (personal protective equipment) at all times.
• All food safety procedures must always be reinforced. For example, keep hot foods hot and cold foods cold.
• Spills must be cleaned up immediately. Students are to notify the instructor of any broken glass or broken cooking tools
**Lesson-specific**
- Students should be made aware that pots full of water and a starch can be heavy and may require a modified carrying position (using two protected hands on either side of the pot rather than the handle).
- Students should be made aware of the potential for burns from hot/boiling liquids as well as steam (particularly during straining).
  - Prior to straining, a proper receptacle (e.g., sieve) must be secured in the sink.

**Terminology**

*al dente*: *Al dente* is a term used to describe the consistency of ideally cooked pasta (the expression literally means “tender to the tooth” in Italian).

*gelatinization*: Gelatinization is the absorption of water in starch, producing a gel.

*gratin*: A *gratin* (Fr.) is a type of potato dish similar to scalloped potatoes; creamy and brown on top.

*gratinate*: To gratinate is to brown on top.

*pilaf*: Rice pilaf refers to a rice sautéed lightly in oil before broth is added. It is then cooked to a soft consistency.

*risotto*: Risotto is dish in which a northern Italian rice is cooked in a broth to a creamy consistency.

**Estimated Time**

3–5 70-minute classes, depending on the amount of labs chosen for this lesson

**Recommended Number of Students**

Up to 24

**Facilities**

Home Economics teaching lab and/or Culinary Arts teaching kitchen

**Tools**

- container for storage
- pots and pans of appropriate size or shape for use in assigned recipe
- saucepans with tight-fitting lids
- spider
- spoon
- strainer (conical), sieve, or colander
- towel or oven mitts for heat protection
Materials
Standard kitchen equipment and ingredients as per recipes selected for labs

Resources

• Staple Foods of the World (includes corn, wheat, potatoes, rice, millet, and sorghum)

• See Chapter 12, “Potatoes”; Chapter 13,” Grains, Pasta and Rice”; and recipes. This resource is more for the instructor, as the information is detailed.

Activity Sheet:
Name that Pasta:

Demonstrating Skills And Knowledge

Procedure
Teacher demonstrations (complete all)

- Rice: select a recipe that serves as an example of how to properly cook rice using a stovetop method.
- Pasta: select a recipe that serves as an example of how to properly cook pasta.
- Potato: select a recipe that serves as an example of how to properly cook potatoes.

Student labs (select 1 to 3)

- Rice: select a recipe for students to cook that serves as an example of how to properly cook rice using a stovetop method (not in a rice cooker).
- Pasta: select a recipe for students to cook that serves as an example of how to properly cook pasta.
- Potato: select a recipe for students to cook that serves as an example of how to properly cook potatoes.

Evaluation Guidelines
Evaluate the students using the Culinary Arts Rubric (Page 6) for lab work as they prepare, cook, and clean up.

Points of evaluation should include:

- Texture or doneness meets requirements.
- Seasoned appropriately.
- Colour is appropriate.
- Temperature is appropriate for the dish (e.g., may be used cold in a salad or served hot).
- Finished product is held according to food safety guidelines.
- Student worked cleanly and safely.
- Student was organized.
- Student followed procedure with proper ingredients.
- Student is enthusiastic and takes initiative, including tasting the product to understand it.
Extension Activities (Optional)

1. Create a display in the classroom, either as a poster with pictures or real samples. Display different types of rice, pasta, and potato and their descriptions. Descriptions may include where it is grown, nutritional benefit, methods, and cooking time.

2. Have a sushi chef come in and demonstrate with student participation.

3. Have a demonstration and lab on making pasta from scratch, including a sauce and/or filling.

4. Have students create a short PowerPoint assignment where they:
   - Select a starch (this can include corn, wheat, legumes, potato, rice, or pasta).
   - Research the history of the starch and where it is grown or produced.
   - Describe the cooking method, nutritional benefits, and how they help our bodies.
   - Attach a recipe using the starch.
